

ASCII EXPRESS

A Complete Telecommunications Package

A ASCII EXPRESS

The ASCII Express gives you a little bit of paradise and a whole lot of keyboard power from the most extensive telecommunications software program available today.

A EASE OF USE

Screen menus ease your way through a detailed chain of commands so you can take full advantage of the program's potential.

A AUTOMATION

You may easily custom design a system of macros from a special file to save hours of keystrokes by automatically programming complex sequences of commands. Simply turn on the computer and the software will automatically deliver you to a designated bulletin board, database or computer user.

A Macro System can even command the ASCII Express itself to send or receive files, chain to another macro or hang up. A phone number library assists the macro system to auto dial up to 26 individual host computer numbers and associated macro library files.

The auto save option receives incoming files larger than could be held in memory thus guaranteeing the accurate capture of an entire file whatever its size.

A FULLY INTERRUPT DRIVEN

Another powerful feature that ensures incoming data is never lost even during execution of any ASCII Express command.

A TERMINAL EMULATION

The ASCII Express offers complete terminal emulation of other computers when using an 80 column board or an external terminal.

A BUILT-IN TEXT EDITOR

An invaluable ASCII Express feature that quickly and accurately prepares text files before transmission saving on line changes. This state-of-the-art

editor simulates all the functions of the most advanced word processing programs available today.

A UNATTENDED OPERATION

This ASCII Express feature keeps your computer permanently 'up' while you're away, enabling you and other users to call in for remote operation. A special entry code gives you exclusive remote operation or you can simply limit which disk drives, slots or files are accessible to callers.

A DEAF TTY STANDARD

ASCII Express supports the DEAF TTY standard (Baudot) when using the Novation Apple Cat Modem.

A HARDWARE COMPATIBILITY

ASCII Express gains maximum compatibility with various host computer systems via a powerful array of file transfer options. Send options include block send, line at a time with prompt handshaking, character at a time with or without prompt handshaking, or the Christensen (X MODEM) protocol method.

ASCII Express is designed to work with all popular hardware configurations of Apple and Apple compatible computers including the new Apple IIe, Basis 108 and Franklin 1000 and 1200 computers. It will soon be available for IBM PC, IBM compatibles, CP/M 80 and CP/M 86 machines.

ASCII Express supports all popular modems at all baud rates standard to each modem, and all popular asynchronous serial cards at the baud rates up to 9600 baud and 19200 baud for the IBM PC version.

ASCII Express supports all popular 80 column cards and external terminals.

MODEM SUPPORT:

- Anchor Automation Mark XII
- ALS Dispatcher
- Apple Comm. Card and Super Serial Card
- Apple Modem 300
- Apple Modem 1200
- Apple III in Apple II emulation mode
- BIT 3 Dual Comm. Plus Card
- CCS 7710, 7711 series
- ESI Lynx
- Hayes Micromodem II and Micromodem IIe
- Hayes Smartmodem 300 and Smartmodem 1200
- MBI VIP Interface Card
- Multi-Tech Modem II
- Novation Apple-Cat and Apple-Cat 212 option
- Novation Smart Cat 1200
- SSM AIO, ASIO Cards
- U.S. Robotics Modems
- Ventel 212 A
- Prometheus Versacard
- Videx PS10 Serial/Parallel Card
- VOLKSMODEM

SCREEN DISPLAYS:

- ALS Smartmodem
- Apple IIe 80 Column text display board
- BASIS 108
- BIT 3 (Full View-80)
- DoubleVision (OmniVision)
- Videx Videoterm & Ultraterm
- M & R Superterm
- Vista Vision 80
- External terminals when using popular serial cards

ASCII EXPRESS

Like a little bit of paradise.

No other telecommunications software offers you so much flexibility, speed or ease of use.

Whether you're a business professional dialing up far and distant places or an at home user talking on the local bulletin board, you'll love the variety of features only ASCII Express gives you.

Exclusive to ASCII Express are features such as the most extensive macro library for unattended call-up and receiving of information, a text editor for composing messages without a word processor, and it handles data transfer at speeds up to 9600 baud.

The ASCII Express supports a full range of 80-column boards and printer interfaces. It allows the sending of electronic mail—and it has the ability to emulate over a dozen different terminals.

There's an easy to understand manual and throughout the program you'll find help menus that make using the ASCII Express an absolute dream.

To learn how the ASCII Express can take you to paradise, see your local dealer, or call UNITED SOFTWARE INDUSTRIES at 213-556-2211.
